

Energy Mix®

Complementary feed for pigs

Energy Mix® is a dried complementary feed for pigs, produced from ingredients of high nutritional value, high digestibility and palatability, sourced from the food industry.

Energy Mix® contains starch from potatoes and grains (mainly wheat) and sugars from confectionary products. All ingredients are collected from food factories under a strict quality control system and are blended, ground and sieved to make a free flowing meal.

At the weaning stage piglets face a host of stressors such as:

- Health challenges
- Management changes
- Diet changes
- Changing environmental conditions

The result is: decreased feed intake – poor digestion – reduced utilization of nutrients. All of the above factors adversely affect the health of the gastrointestinal tract and reduce performance.

Energy Mix® contains an ideal combination of heat processed ingredients of high energy value and natural sweeteners. They contribute to increased feed intake and digestibility and enhance gastrointestinal health.

Advantages

- Increase palatability
- Increase feed intake at the delicate stage of weaning
- Improve nutrients utilization
- Improve FCR and growth rate

Components

- Chocolate and biscuits surplus products from the confectionary industry
- Surplus products from the snack industry
- Surplus products from the bakery and pasta industry
- Rice bran and wheat feed

Typical analysis

Dry matter	90%	Starch	33,5%	NE sows	13,4 Mj / Kg
Total Protein	10%	Sugars	11,5%	Calcium	0,06%
Total Fat	15%	NE pigs	13,2 Mj / Kg	Sodium	0,33%

Inclusion

- Suckling and weaned piglets up to 25% of total ration.
- Growing and finishing pigs up to 15% of total ration.
- Lactating sows up to 25% of total ration
