

Commercial piglet trial: are you ready for the zero Zn and antibiotics era?

Giannis Karvelis, Nuevo SA, g.karvelis@nuevo-group.com

Here is the summary of the recently conducted piglet trial which took place in Kiernan's RnD farm in Longford, Ireland. The aim of the trial was to evaluate the dose response effect of **nuPhoria** on piglets' performance against antibiotics and ZnO supplementation.

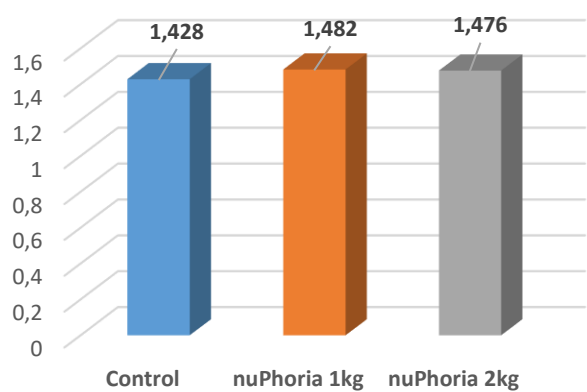

In total 510 weaned piglets were allocated in 3 treatments and received the standard **numax** range feeds. Positive control feeds were supplemented with apramycin and high Zn dose whilst the other treatments with 1Kg/ton and 2 Kg/ton **nuPhoria** respectively.

Towards zero Zn & antibiotics era, performance responses for both **nuPhoria** treatments were very promising and in line with expectations!
