

nuphoria farm pack

CHARGED UP WITH SCIENCE & NATURE

Targeted Nutrigenomic Protection for High-Performing Ruminants

Modern ruminants are expected to perform every day, however, stress, toxins, and metabolic load hold them back.

nuphoria farm pack works where performance is built - at the cellular and metabolic level - helping animals stay productive and efficient in real farm conditions.

One Pack - Dual Action

nuphoria farm pack combines the nutrigenomic power of nuphoria with the proven mycotoxin control of nufense, delivering synergistic benefits:

- Supports antioxidant and anti-inflammatory pathways
- Enhances liver function and metabolic stability
- Strengthens natural cellular defenses
- Reduces the metabolic burden caused by stress and mycotoxins
- Improves nutrient utilization and feed efficiency

From Cellular Support to Measurable Performance

Less energy spent on defense means more energy converted into milk and performance. Proven benefits under commercial farming conditions include:

- ✓ Increased milk production
- ✓ Improved butter fat percentage
- ✓ Reduced somatic cell counts (SCC)
- ✓ Fewer mastitis incidents
- ✓ Improved feed efficiency and nutrient utilization

Nutrigenomics Meets Smart Mycotoxin Management

- **nuphoria** supports gene-regulated mechanisms related to antioxidant defense, inflammation control, and detoxification
- **nufense** binds mycotoxins using carefully selected low-CEC clays, without reducing the availability of vitamins and essential nutrients
- Preserves feed value and allows animals to fully express their productive potential

Ideal during high-demand periods such as peak lactation, metabolic stress, or heat stress

Dosage

Small ruminants: 5 gr / head / day
Dairy cows / fattening calves: 40-50 gr / head / day
